Wound management at your fingertips.
Hydrosorb® Gel – in a practical dosing syringe.

Presentations | Size | Unit | Code No. | Ref. No. | Units per Case
---|---|---|---|---|---
Hydrosorb Gel | 15 g | Pack of 10 | 500 844 | 3 834 036 | 10
Get to grips with wound management.
Hydrosorb® Gel – application as easy as 1, 2, 3.

Hydrosorb Gel from HARTMANN is an amorphous hydrogel which is used for the treatment of almost dry chronic wounds. The transparent gel facilitates necrosis detachment by permanently releasing moisture into the wound. Rounding off a comprehensive treatment concept, Hydrosorb Gel helps to reliably cleanse the wound. What’s more, it can be combined with all (wound) dressings.

Safe dosing
The syringe enables accurate dosing, dispensing the gel with the tip directly into the wound with no mess, and thus minimizing the risk of application errors.

Safe dosing
The syringe enables accurate dosing, dispensing the gel with the tip directly into the wound with no mess, and thus minimizing the risk of application errors.

Simple documentation
The wound volume and the amount of gel still available can be accurately determined to the nearest milliliter by two scales.

Combines flexibly and causes less pain
Hydrosorb Gel enables quick wound cleansing thanks to its hydrosorb effect. It can be combined with all wound dressings and minimizes pain during dressing changes.

High cost-efficiency
Unlike tubes, where a lot of gel often tends to be left unused, the Hydrosorb Gel syringe can be effectively emptied. Also, the syringe can be re-sealed whenever there is a need to interrupt treatment.

Saves a lot of time
The ease of use of the syringe mechanism ensures reliable dosing of the gel, saving valuable time.
